## METHOD AND SYSTEM FOR MONITORING COMBUSTION SOURCE EMISSIONS

## Abstract of the Disclosure

A method and system for determining a concentration level of NO  $_{\rm X}$  in an exhaust stream from a combustion source. The method comprises capturing sample gas from the exhaust stream using a sampling device. NO  $_{\rm 2}$  in the sample gas is converted to NO by passing the sample gas through a catalytic NO  $_{\rm 2}$  converter. The method also comprises removing water from the sample gas by passing the sample gas through a dryer and determining a sample gas NO concentration level. The step of converting NO  $_{\rm 2}$  is performed at a temperature above the dew point temperature of the sample gas.
